

The AAS Drench System provides a way to administer large amounts of fluid to an animal. Drenching fresh and sick cows has become a useful management tool to reduce fresh cow problems, revive sick cows and stabilize cows with high fevers. Veterinarians and farmers find the AAS Drench System economical, easy to use and durable for all drenching applications.

Features

- A non-breakable PVC speculum with an attached nose clip to keep it in place and free two hands for pumping.
- A high volume bilge pump (6 strokes per gallon) that handles slurry as well as liquid.
- A Stomach tube beveled on one end to protect the esophagus from injury.
- Complete instructions for use to insure proper administration of fluids and reduce the risk of death or damage.
