ENERGY-MALT

with **CELMANAX**[®]

**A Liquid Energy
Supplement
For Post Partum
Dairy Cows**

- **For Postpartum, Sick Or Stressed Cows.**
- **A Faster Start Increases Lactation Production**
- **Provides Both Instant and Residual Energy.**
- **Convenient, Pre-Mixed, Easy To Use.**

ENERGY-MALT

with 

Energy-Malt with Celmanax

A liquid supplement to provide additional energy to cows at parturition. It supplies readily available energy and other essential nutrients at the time of greatest negative energy balance. Energy-Malt with Celmanax® is an improved formula of a reputable product used by profit-minded farmers for more than 10 years.

Propylene Glycol

When converted to glucose, propylene glycol increases the concentration of insulin in blood. Insulin acts on adipose tissue to reduce fat mobilization. Propylene glycol is recognized by dairy producers as an important source of rapid energy for energy deficient cows.

Calcium Salts Of Fatty Acids

This ingredient known as dietary fat provides additional energy at a time when appetite is depressed and energy is needed by the cow for both calving and milk synthesis. Research demonstrates a possible synergist effect of dietary fat and glucose precursors.

Niacin

Niacin is a B vitamin which is used to maintain liver health and reduce fat mobilization from adipose tissue.

Celmanax®

Celmanax® is a combination of yeast culture, yeast extract and hydrolyzed yeast that provides a consistent supply of mannan-oligosaccharides (MOS) and Beta glucans, an immune booster, to provide supportive care to stressed animals.

Indications For Use

Use of Energy-Malt with Celmanax® is ideal for cows at calving, during times of sickness and times of reduced intake. One or more doses of Energy-Malt with Celmanax can be a part of a fresh cow protocol for all cows or cows with depressed appetite, high fever or other symptoms. It can be used for cows off feed or to supplement cows during mastitis infection and after DA surgery.

Packaging

Energy-Malt w/Celmanax is packaged in one gallon containers containing six (6) 630 ml doses per gallon and in five gallon pails which contain thirty (30) 630 ml doses per pail.

Directions:

SHAKE WELL BEFORE USE.

Give orally using a drench bottle. Give one dose (630 ml) once per day for 2-4 days. Consult your veterinarian or nutritional advisor for further details.
